

DRINKS METER

A BEAUTIFULLY DESIGNED TABLET-BASED SOLUTION TO BRIEF SCREENING AND DATA RECORDING FOR RECENT DRUG AND ALCOHOL USE IN COMMUNITY SETTINGS

The drugs meter mini is rapid, self-administered, anonymous data collection application. Taking 3 minutes on average to complete, it records the time and location of data capture allowing precise mapping of drug use patterns. Data is securely encrypted until the data collection session is complete. A data report is provided back to you within 72 hours.

The Drugs Meter Mini dispenses with the need for paper based data collection methods with subsequent time consuming transfer into database. Its slick, user-friendly interface is ideal for researchers working in the nighttime economy or those doing fieldwork in festivals or other public spaces. Based on the highly successful Drugs Meter and Drinks Meter series the Drugs Meter Mini also provides immediate feedback on the persons alcohol consumption that day in terms of units, calories, and calories equivalents.

The Drugs Meter Mini records the following variables:

- Age
- Gender
- Last year drug use prevalence (using the current Drugs Meter drug database of 135 substances)
- Last month drug user prevalence with average daily use for 10 most commonly used drugs and number of days used in the last month
- Drug use and spend on the day of interview for the most commonly used drugs
- Alcohol consumption with instant feedback on consumed units and calories
- Data reports provided back to you within 72 hours
- City of residence
- Sexuality

Until December 31st 2013 the introductory cost for this service (with no limit on numbers) is £300/report
